Author Index to Volume 52

(L) indicates Letters to the Editor, (E) indicates Errata, and (T) indicates Title only. It will be noted that there are no references to "see someone else" in the Author Index. Although it has meant a little duplication, there have been included under each author all articles in which he was author or co-author. All articles in which the author has participated are arranged in the chronological order of publication. A bibliography with author names arranged as in the original article is obtained by insertion of the author's name in the indicated (——) space under each indexed name. Although not strictly an authored article, we have included Book Reviews both under the book author as well as the reviewer.

The abstracts of papers presented at meetings are keyed by the same notation that identified them by day and session of presentation. If the paper covered by the abstract has been submitted and published in the same year as the abstract, this has been indicated by a solidus (/) between the abstract notation and the Journal page of the full article, i.e., 264(FA*12*)/622 indicates that the paper described in abstract No. FA*12* on page 264 has been published in full on page 622.

Aagard, R. L. Determination of the diffraction loss in a pulsed ruby laser—1319(TC*14*)

Acquista, N.
Porter, T. L., D. E. Mann, and ——. Emission spectrum of CF—1311(WB*13*)

Adams, N. I.
Atwood, J. G., ——, G. W. Dueker, and W. Gratz. Small-angle scatter in solid-state optical masers—595(TD*17*)

AGFA, Publisher. *Mitteilungen aus den Forschungslaboratorien der AGFA Leverkusen-Munchen, Band III* (Book). Reviewed by George C. Higgins—1085

Aguilar, Mariano
Burian, Hermann M. and ——. Temporal integration of the *b* waves of the human ERG—599(FB*18*)

Allen, Wallace B. and Paul Latimer. Anomalous dispersion of β-carotene solutions—192

Alpern, Mathew
—— and Lloyd Barr. Durations of the after-images of brief light flashes and the theory of the Broca and Sulzer phenomenon—219
Campbell, F. W. and ——. Pupillomotor spectral sensitivity curve and color of the fundus—1084(L)

Anderholm, N. C.
Peck, Edson R., Baij Nath Khanna, and ——. Secondary standards of Ar I and Hg^{198} I in the near infrared—536

Andrew, Kenneth L.
Kaufman, Victor and ——. Germanium vacuum ultraviolet Ritz standards—1223

Angel, D. W.
Wilkinson, P. G. and ——. Evaluation of a specially coated concave diffraction grating in the vacuum ultraviolet—1120

Archer, R. J. Determination of the properties of films on silicon by the method of ellipsometry—970

Asher, H. *The Seeing Eye* (Book). Reviewed by Kenneth N. Ogle—837

Ashley, E. J.
Bennett, H. E., Jean M. Bennett, and ——. Infrared reflectance of evaporated aluminum films—1245
Bennett, H. E., M. Silver, and ——. Infrared reflectance of aluminum evaporated in an ultra-high vacuum—1310(WA*14*)

Atwater, H. A. Apparent distortion of relativistically moving objects—184

Atwood, J. G., N. I. Adams, G. W. Dueker, and W. Gratz. Small-angle scatter in solid-state optical masers—595(TD*17*)

Aulin, Everet. Necrology—1188

Austin, W. E., J. D. Purcell, and R. Tousey. Solar spectrum photographed to 168 A at grazing incidence without stray light—597(FA*18*)

Axelrod, Norman N. Effects of structure on optical properties of thin films in the vacuum ultraviolet—606(SA*13*)

Axtell, J.
Pistoresi, D. and ——. Effect of anisotropic transmission coefficients on representations of polarizing optics—1318(TB*16*)

Babrov, Harold J. Error in integrated transmittance due to the spectrometer slit function—831(L)

Bagchi, S. N.
Hosemann, R. and ——. *Direct Analysis of Diffraction by Matter* (Book). Reviewed by R. F. Raeuchle—1084

Baird, K. M. and D. S. Smith. Primary standard of length—507

Baker, Howard D. Initial stages of dark and light adaptation—589(TA*1*)

Balinkin, Isay. Brightness amplification in phosphors—605(FF*16*)

Ballik, E. A.
Javan, A., ——, and W. L. Bond. Frequency characteristics of a continuous-wave He-Ne optical maser—96(L)

Barakat, Richard
—— Solution of the Luneberg apodization problems—264
—— Application of apodization to increase two-point resolution by the Sparrow criterion. I. Coherent illumination—276
—— Computation of the transfer function of an optical system from the design data for rotationally symmetric aberrations. Part I. Theory—985
—— **and Marie V. Morello.** Computation of the transfer function of an optical system from the design data for rotationally symmetric aberrations. Part II. Programming and numerical results—992
—— Reflection and refraction of electromagnetic waves at a plane surface using complex angles—1316(TA*13*)
—— **and Agnes Houston.** Diffraction effects of coma—1324(FB*13*)
—— **and Marie V. Morello.** Computation of the total illuminance (encircled energy) from the design data of an optical system for rotationally symmetric aberrations—1328(FD*17*)

Barlow, Robert B., Jr.
Jeppesen, Myron A. and ——. Determination of particle size of colloidal gold from absorption spectra—99(L)

Barnett, J. Dean and Franklin S. Harris, Jr. Test of the effect of edge parameters on small-angle Fresnel diffraction of light at a straight edge—637

Barr, Lloyd
Alpern, Mathew and ——. Durations of the after-images of brief light flashes and the theory of the Broca and Sulzer phenomenon—219

Barr, William L. Method for computing the radial distribution of emitters in a cylindrical source—885

JOURNAL OF THE OPTICAL SOCIETY OF AMERICA VOLUME 52, NUMBER 12 DECEMBER 1962

Subject Index to Volume 52

Key to index use.

1. Subjects, not titles have been indexed.

2. Contents of papers (and abstracts of papers presented at meetings) have been indexed by principal subject rather than by a word breakdown of the title. The abstracts of papers presented at meetings are keyed by the same notation that identified them by day and session of presentation.

3. Subjects have been indexed in subdivisions according to key words with prepositions such as "on," "in," "of," "with," included where essential for euphonious interpretation but not affecting the alphabetical arrangement of the principal subject. In many cases where obvious, these prepositions have been omitted.

Aberrations
calculation of diffraction patterns in presence of —, 1325(FB*19*), 1325(FB*20*)
chromatic, correction for secondary and tertiary —, 608(SB*14*)
coefficients of concentric optical systems, 1361, 1367
coma-type, from convergent and divergent illumination of gratings, 768
diffraction effects of coma, 1324(FB*13*)
mirror systems and gratings for oblique incidence, 408
monochromatic, symmetrical optical systems, 20, 25
spherical, computations of —, 833
third-order
corrections machine-programmed, 1327(FD*13*)
for design of cemented aplanatic doublets, 1185
transfer function of optical system computed from design data for rotationally symmetric —, 985, 992
use of high-order — in lens design, 1328(FD*16*)

Absorption
of aerosols, 896
band, quasi-random model for —, 606(SA*11*), 1208
of carbon dioxide, optical method of monitoring — content of blood, 1325(FB*18*)
by carbon monoxide, 537
of evaporated films of double fluorides, 1310(WA*16*)
of gold, particle-size effect, 99
infrared
bands associated with POH group, 829
bands of CO_2, 1017
line frequencies from digitized film reader, 1311(WB*15*)
of magnesium oxide, 859
of lead monoxide films, 261
of multilayer interference filters, 753
of nitrous oxide in atmosphere, 858
in opaque diffusers, 1250

of polypropylene, effect of ultraviolet exposure on —, 1318(TB17)
screens for — standards in spectrophotometry, 284
of thin adsorbed films on metal surfaces undergoing stress, 1410
by turbid materials, 292
Aluminum
infrared reflectance of evaporated — films, 1245, 1310(WA14)
mirrors for uv, silicon-monoxide protection of —, 1310(WA18)
oxide, infrared transmittance and reflectance of —, 223
Ammonium Dihydrogen Phosphate
polarization modulator for servo system, 718
Apodization
resolution increase by — for coherent illumination, 276
solution of Luneberg — problems, 264
Argon
infrared lines of — for secondary standards, 536
levels of 4f of —, 591(TB11)
spectral-line intensities from — plasmas, 829
Astronomy
Coronagraph with improved scattered-light properties, 596(FA13)
optical-spacecraft response to stars, 1313(WC11)
triple correlator used as interferometer in —, 1314(WD15)
Atmospheric Optics
dispersion
infrared, 416
invariance with long-path refractometer, 777
emission measurements of upper air from rockets, 1313(WC12)
forward scattering, approximation formula, 797
infrared
prediction of — radiation distribution from sky, 1305
transmittance over slant paths, 606(SA14)
infrared noise
height dependence of —, 601(FC20)
range dependence of —, 601(FC19)
irradiance distribution in haze and fog, 787
long-path interferometry, 781
meteorological range from horizon contrast, 606(SA15)
nitrous oxide abundance in atmosphere, 858
photographic resolution with Mach 3 and Mach 7 air flows, 1317(TB14)
polarization of sky, wavelength dependence, 1164
scattering
infrared, 1313(WC13)
visible and infrared, 1010
spectral radiance sky and terrain in infrared, 201
transmission and scattering, 38
turbulence effects in aerial photography, 1313(WC16)
Atomic Spectra
ArI, levels 4f, 591(TB11)
ArI and $Hg^{198}I$ in near infrared, 536
CsI, 441
Cm, ground term of first spectrum, 1311(WB12)
energy levels displaced by optical pumping, 1322(FA1)
Er, 504
He, Ar, Xe continua in high-pressure discharges, 857
Hg 198, energy levels and pressure shifts, 866
Hg, hyperfine structures and isotope shifts, 1311(WB11)
H, Stark effect, 239
hyperfine structure of Mg, Zn, Cd, Hg, 845
Report of Triple Commission for Spectroscopy, 477, 583
Tl, hyperfine structure and isotope shift, 501
Axicons
theory of image-formation by —, 287
Beryllium
infrared transmittance and reflectance of — oxide, 1078
Barium
Reststrahlen of evaporated films of — fluoride, 1309(WA11)

La Vision en Lumière Intermittente by Henri Piéron (reviewed by Robert M. Boynton), 1086

Cadmium
hyperfine structure of spectrum, 845
sulfide
mechanical determination of — absorption spectrum, 579
evaporated films of —, 581
Calcite
dispersion of birefringence, 580
Calcium
fluoride, reststrahlen of evaporated films, 1309(WA*11*)
tungstate
continuous neodymium-doped — laser, 1323(FA*18*)
neodymium-doped — masers, 1319(TC*12*)
Californium
emission spectra of —, *222*
Carbon
— arc as radiation standard, 1156
dioxide
infrared absorption of —, 1017
optical method for monitoring — content of blood, 1325(FB*18*)
emissivity of borated graphite, 1315(TA*12*)
monoxide, infrared absorption, 539
Cathode Ray Tube
spectral energy distribution, 101
Cesium
arc spectrum of —, 441
enhanced Faraday rotation in — vapor, 1316(TA*17*)
Coherence
blackbody radiation functions for —, 596(FA*12*)
increase of resolution for — light by apodization, 276
of instruments, 1316(TA*19*)
measures of bandwidth and — time, 1309(FA*11*)
in optics, 1407
quantum mechanical description of laser action, 871
ruby laser
characteristics of —, 594(TD*14*)
photography of radiation from —, 878
theory
for optical-cavity masers, 1322(FA*13*)
for plasma, 98
thermodynamic entropy in partial —, 1322(FA*12*)
time for maser, 470
wave-interaction experiments, *225*
Color
apparent fluorescence of —, 1312(WC*1*)
blindness, acquired, 593(TC*3*)
centers in halide crystals, 1187
chromatic adaptation with stabilized retinal image, 1321(TD*15*)
chromatic Stiles-Crawford effect in anomalous trichromats, 836
chromaticity discrimination
comparison of three psychophysical methods, 1067
in spectrum from 510 to 630 mμ, 1071
difference equations, comparison of —, 1075
discrimination
fluctuation theory of —, 590(TA*4*)
threshold-measurement contributions to theory of —, 593(TC*1*)
filter effects, 226
induction, factors affecting, 603(FE*15*)
matching, monocular vs binocular, 75
naming responses
to mixtures of red light and incandescent lamp light, 1058
to surface colors, 1326(FC*15*)
perception
effect of exposure time on —, 1326(FC*14*)
interaction between saturation and luminance, 1320(TD*14*)
of red light of varying luminance and purity, 1058
red-green sensitivity, 81
vector model for — sensations, 692
Colorimetry
calculation of differences, computer program, 475
codes for reflecting surfaces, 604(FE*17*)
color-mixture functions
field trials, 58
physical approximation of —, 679
counting metamers, 313
cube-root coordinate difference computation, 604(FE*18*)
difference equations, comparison of —, 604(FE*16*)
digital tristimulus computer, 604(FE*19*)
Lovibond color system, 813
multivariate statistical techniques, 835
in parafoveal fields, 1321(TD*16*)
tristimulus values, variability of spectral, 685
Compensator
nonquarter wave, for analysis of elliptically polarized light, 1080
Sénarmont, for flow birefringence, 562
Computers
cylindrical ray-tracing formulas for —, 472
for diffraction image of a point in presence of aberration, 1325(FB*20*)
for energy in diffraction-pattern rings, 1328(FD*17*)
for lens design
automatic third-order corrections, 1327(FD*13*)
involving designer by use of visual displays, 1328(FD*15*)
for optical design
program of —, 172, 1218
program for transfer function, 992
program for film thickness adjustment to produce desired reflectance, 1310(WA*19*)
for resolution of overlapping spectral lines, 998
for spherical aberrations, 833
Convolutions
optical use of — for pattern recognition, 454
of pupil function over aperture to determine transfer function, 985, 992
of visual spread function, 460
Crystals
calcium tungstate neodymium-doped for continuous laser, 1323(FA*18*)
color centers in halide —, 1187
formation of glass from liquid structures and —, 1309(WA*1*)
luminescence kinetics in undoped RbI and KI —, 1320(TC*20*)
potassium dihydrogen phosphate, quartz, and triglycine sulfate, optical harmonics from —, 880
pyrolytic graphite — for infrared polarizer, 665
ray tracing through uniaxial —, 187
reflectance of reststrahlen —, far infrared, 14
Curium
ground term of first — spectrum, 1311(WB*12*)

Detection
limits in radiation and optical pyrometry, 1387
of target
effect of structure in —, 214
in pictorial data by spatial filtering, 1259
Detectors
information capacity of, 1193
for laser radiation, 1341
photomultiplier
circuit for precision spectrophotometry, 1321(TD*20*)
slow transient response in infrared —, 832
properties of immersed radiation —, 607
silicon photo-diodes of high sensitivity, 1237
theory of metal-film bolometers, 957
Deuterium
rotational and vibrational constants of HCl^{35} and DCl^{35}, 1
Diffraction
boundary wave
generalization of Maggi–Rubinowitz theory of —, 615, 626, 717
Rayleigh–Kirchhoff theory, 761
calculation of — patterns of circular pupil with variable transparency, spherical aberration and defocusing, 1325(FB*19*)
determination of — loss in pulsed ruby laser, 1319(TC*14*)
effects of coma, 1324(FB*13*)
electromagnetic theories, comparison of three, 600(FC*17*)
energy in — pattern rings computed automatically, 1328(FD*17*)
far-field — and polarization properties of hollow cone, 1324(FB*12*)
focal isolation with Fresnel zone plates, 1324(FB*11*)
Fraunhofer patterns for selections of annular ring-type apertures, 600(FC*12*)
Fresnel, edge-parameter effects, 637
geometrical theory of —, 116
by inhomogeneous regions, 140
Kerr effect, 599(FC*11*)
Kirchhoff theory of —
boundary condition and Rayleigh formulas, 336
validity of —, 1325(FB*17*)
microwave aperture antennas and —, 131
new derivation of Babinet's principle, 1324(FB*14*)
patterns of unsymmetrical pupil functions, sideband interpretation, 1131
Rayleigh theory, boundary wave in —, 601(FC*18*)
reconstructed wavefronts from Fresnel — pattern, communication theory of, 1123
theory of radar detection of airport runways, 51
wide-angle — by black half-plane, 1324(FB*15*)
Dispersion
anomalous, in infrared, 579
atmospheric
in infrared, 416
invariance with a long-path refractometer, 777
of β-carotene solutions, 192
of calcite birefringence, 580
infrared
of quartz and sapphire, 1023
of some oxide glasses, 1327(FD*12*)
of optical glasses, variations with melt, 1310(WA*13*)
of synthetic sapphire, 1377
Distortion
in panoramic photography, 608(SB*18*)
relativistic, 184

Echelles
for extreme ultraviolet line profiles, 597(FA*16*)
improvements in quality and energy distribution, 1324(FB*16*)
infrared, efficiency of —, 592(TB*19*)
Electro-optical Effect
image converter and intensifier tubes, 595
Electroretinogram
human
chromatic adaptation of —, 1320(TD*13*)
sensitivity of —, 1402
temporal integration of the *b* waves of —, 599(FB*18*)
of vertebrates, 588
Emission
spectra
calibration of spectrofluorimeters for measurement of —, 1256
of Californium, 222
of mercury hydride
analysis of, 1201
isotope shift, 1205
of nitrous oxide with pressure modulation, 543
of pressure-modulated gases, pressure broadening, 546
upper-air — measured from rockets, 1313(WC*12*)
of visible radiation from free electrons passing near a grating, 1315(TA*1*)
Emissivity
of Globar, 341
of high-current nanosecond arc channels, 605(FF*14*)
infrared, of sapphire at elevated temperatures, 1078
of nuclear-reactor materials, 1315(TA*12*)
of polypropylene, effect of ultraviolet exposure on —, 1318(TB*17*)
Erbium
energy levels of Er II, 504
Errata (see individual subject entries)

Fibers
frequency response of — bundles, 99
optical-scanning methods for image improvement through —, 607(SB*13*)
phosphor granularity, influence of — face-plate transmission, 605(FF*17*)
transmittance, reflectance, and resolution measurements of — bundles, 1318(TB*19*)
Films
antireflection
theory of —, 437
triple-layer on glass, 965
of cadmium sulfide, optical and electrical properties of —, 581
Čerenkov radiation in —, 1315(TA*11*)
computer program to adjust thicknesses to produce desired reflectance, 1310(WA*19*)
of double fluorides, absorption of —, 1310(WA*16*)
double-layer, phase shift on reflection, 606(SA*12*), 912
evaporated aluminum, infrared reflectance of —, 1245
evaporated metal, refractive index in extreme ultraviolet, 1310(WA*17*)
gold, photoelectric emittance from —, 1081
lead-monoxide, optical properties of —, 261
magnesium fluoride — between aluminum for vacuum ultraviolet grating, 1120
metal- — bolometers, theory of, 957
multilayer
absorption prediction, 753
design of antireflection — for infrared, 431
methods of altering characteristics of —, 1149
optical properties of — adsorbed on metal surfaces undergoing stress, 1410
oxide on titanium, measurement of thickness of —, 427
reflection filters for ultraviolet, 1310(WA*15*)
reststrahlen bands from evaporated —, 1309(WA*11*)

Films (Continued)
structure effects on vacuum ultraviolet optical properties, 606(SA*13*)
vacuum depositing by maser, 1319(TC*18*)
Filters
color-mixture-function approximation by —, 679
infrared reflection, 17
interference
for far ultraviolet, 1380
prediction of absorption loss in —, 753
linear, low-pass, properties of —, 827
reflection, for ultraviolet, 1310(WA*15*)
Fluorescence
apparent —, of colors, 1312(WC*1*)
calibration of spectrofluorimeters, 1256
modulation transfer functions of radiographic systems using —, 774
rise-time, from short uv-burst, 1079
Fourier transforms
for effect of vibration on the photographic image, 1317(TB*11*)
energy distribution from interference fringes by —, 596(FA*11*)
for mathematical resolution of overlapping spectral lines, 998
for new derivation of Babinet's principle, 1324(FB*14*)
to obtain line-spread function of living human eye, 1040, 1046
replacement by Fejer series in spectroscopy, 472
for transfer-function computation from optical-design data, 985, 992
Wiener-spectrum analysis
of photographic granularity, 669
of radiographic systems using fluorescent screens, 774, 1162
Frequency response
of continuous-wave He–Ne optical maser, 96
of fiber bundles, 99

Geometrical optics
lens design
by computer, 172, 177
re-evaluation of problem, 1218
ray tracing through uniaxial crystals, 187
recent ideas in —, 1326(FC*1*)
theory of diffraction, 116
Germanium
vacuum ultraviolet Ritz standards, 1223
Glass
antireflection films on —, triple-layer for visible and infrared, 965
As-S-Br, properties of —, 721
automatic high-speed polisher of — lenses, 1328(FD*19*)
dispersion, variations of — with melt, 1310(WA*13*)
efficient pumping of neodymium-doped — maser, 1319 (TC*13*)
formation from liquids and crystals, 1390(WA*1*)
infrared dispersion of some oxide —, 1327(FD*12*)
lasers, interaction between two Nd^{3+} —, 1323(FA*17*)
neodymium
for pulsed laser, 1323(FA*19*)
threshold pumping characteristics of — laser, 1318(TC*11*)
transmittance standards of —, 1309(WA*12*)
Gold
particle size, influence on absorption, 99
photoelectric emittance from — films, thickness dependence, 1081
reflectivity, absence of temperature dependence, 948

Graphite
refractive index of — and coals, 197
transmission polarizer for infrared, 665
Gratings
aberrations, for oblique incidence, 408, 412
blazed
improvements in quality and energy distribution, 1324(FB*16*)
replica for soft x-ray spectroscopy, 1312(WB*17*)
effect of polarization on energy diffracted by —, 1081
plane, for infrared wavelength calibrations, 862
use of convergent and divergent illumination with —, 768
for vacuum ultraviolet
concave, coated, 1120
efficiency of aluminized —, 525
visible radiation from — due to passage of electrons nearby, 1315(TA*1*)

Helium
continuum source for uv-absorption-line determination, 1311(WB*16*)
level populations from hollow-cathode plasma, 592(TB*15*)
— neon laser for velocity of light, 1324(FA*20*)
vacuum ultraviolet continuum in high-pressure discharges, 851
Hydrogen
absorption spectrum, quadrupole and induced dipole —, 591(TB*12*), 1004
fluoride
infrared absorption spectrum of —, 1113, 1118
Lorentz parameters and vibration-rotation interaction constants for fundamental band of HF, 1374
rotational and vibrational constants of HCl^{35} and DCl^{35}, 1
Stark effect in —, 239

Image Formation
assessment parameters, 1351
by Axicons, theory of —, 287
through fiber optics, improvement by optical scanning methods, 607(SB*13*)
on retina, optical and optomotor factors in —, 589(WB2)
Information theory
for beam of light, 493
of radiation detectors, 1193
of reconstructed wavefronts from Fresnel diffraction patterns, 1123
sideband interpretations and diffraction patterns of unsymmetrical pupil functions, 1131
Infrared
absorption bands
associated with POH group, 829
of carbon dioxide, 1017
of carbon monoxide, 539
absorption lines from digitized film reader, 1311(WB*15*)
absorption spectrum of hydrogen fluoride, 1108, 1113
anomalous dispersion, 579
antireflection coatings, triple-layer on glass, 965
dispersion
of air, 416
of some oxide glasses, 1327(FD*12*)
variation of — with melt of optical glass, 1310(WA*13*)
emission spectra
of nitrous oxide, 543
pressure-broadening, 546
filters, 17
antireflection-film, design for —, 431
oceanography applications, 607(SA*16*)
optical materials and lenses, refractive index and color correction, 420
photomultipliers, slow transient response of —, 832

properties of sapphire at elevated temperature, 1078
radiation from sky, predicting distribution of —, 1305
reflectance
of aluminum films, 1310(WA*14*)
of evaporated aluminum films, 1245
of evaporated films, 1309(WA*11*)
reflection from reststrahlen crystals, 14
scanners, spurious resolution in —, 345
scattering of —, by atmosphere, 1010, 1313(WC*13*)
secondary standards of ArI and $Hg^{198}I$, 536
sources, radiant energy from, 859
spectrum of dideuteroacetylene, 656
transmittance of atmosphere over slant paths, 606(SA*14*)
transmittance and reflectance
of aluminum oxide, 223
of beryllium oxide, 1078
wavelength calibration by plane grating, 862

Interference
and the Alford and Gold effect, 1335
coherence of instruments, 1316(TA*19*)
filters
prediction of absorption loss in —, 753
transmitting, for far ultraviolet, 1380
wave-interaction experiments, 225

Interferometer
for angle-displacement measurement, 1315(WD*17*)
derivation-recording, wavefront-shearing, 1314(WD*13*)
diffraction-grating —, theory of, 520
Fabry-Perot
cube-corner, 452
parabolic, 342
for phase change on reflection, 1314(WD*12*)
rapid-recording, 222
for mapping optical flats, 471
for optical frequency response, 600(FC*15*)
polarizing, for optical frequency response, 1314(WD*16*)
triple correlator used as —, 1314(WD*15*)
zone-plate, common-path, 1314(WD*14*)

Interferometry
arc spectrum of Cesium I by —, 441
long-path through atmosphere, 781
mapping of flat surfaces by —, 471, 600
measurement of refractive index by — for coals and graphite, 197
by Michelson type for far infrared energy measurements, 859
multiple-beam regenerative, circulatory — for study of light-propagation effects, 1143
of ruby maser, 595
scatter-fringe —, 600
spectral-line energy distribution by —, 596(FA*11*)
for testing large optics, 1314(WD*11*)
two-beam, interpretation by Fejer series, 472
ultraviolet spectrum of Thorium by —, 447
verification of relativistic Doppler effect by —, 529

International Commission for Optics, 841, 1189

Kirchhoff formula
for boundary diffraction wave, 336, 761
microwave diffraction, 131
validity of —, 1325(FB*17*)

Krypton
standard of length by Kr-86 line, 507

Lamps
coiled-coil filament, equation for —, 473
thermal, luminous efficiency of —, 395
Xenon
for optical pumping, 595
stability of high-pressure, —, 343

Lasers
continuous
helium–neon, for velocity of light, 1324(FA*20*)
neodymium-doped calcium tungstate —, 1323(FA*18*)
solid-state —, 602(FD*13*)
continuous sun-powered, condenser for —, 1319(TC*17*)
detection of radiation from —, 1341
end-pumped, parameter optimization of —, 595(TD*18*)
gaseous
helium–neon, 31
He–Ne, 96
glass
interaction between two Nd^{3+} —, 1323(FA*17*)
neodymium, threshold pumping, characteristics of —, 1318(TC*11*)
neodymium, high-power pulsed, 1323(FA*19*)
optical pumping by exploding wires, 603(FD*19*)
pulsed neodymium high-power —, 1323(FA*19*)
for retina coagulator, 607(SA*17*)
ruby
coherence and radiation characteristics of —, 594(TD*14*)
detection of axial-mode differences, 594(TD*11*)
determination of diffraction loss in pulsed —, 1319(TC*14*)
high-speed photography of —, 609(TD*14*), 878
optical correction of —, 1319(TC*16*)
time distributions, 594(TD*13*)
time-resolution spectroscopy of pulsed reflector —, 1323(FA*16*)
wave-interaction experiments, 225

Lead
monoxide films, optical properties of —, 261

Lens Design
aberration coefficients for concentric systems and correctors, 1361, 1367
algebraic, basic determinants in —, 1301
cemented aplanatic doublets, 1185
chromatic aberrations
corrections for infrared lenses, 420
correction for secondary and tertiary —, 608(SB*14*)
by computer, 177, 606(SA*1*)
for aspheric surfaces, 608(SB*15*)
program, 172
encircled-energy computation in —, 1328(FD*17*)
merit function for —, 608(SB*16*)
for night reconnaissance, 1328(FD*14*)
for parabola null corrector, 608(SB*17*)
recent ideas in —, 1326(FC*1*)
re-evaluation of problem, 1218
selection of materials, graphical aids for —, 1327(FD*11*)
third-order corrections machine-programmed, 1327(FD*13*)
triplet, third-order and fifth-order analyses, 389
use of high-order aberrations in —, 1328(FD*16*)
use of visual displays in —, 1328(FD*15*)
varifocal system
four-component, 376
linearly compensated, 905
three-component, 363
two-component, 353

Lighting
electronic flash — for motion-picture photography, 1317(TB*12*)
wedge, theory and practice of —, 607(SB*12*)

Lithium
fluoride
reststrahlen of evaporated films of —, 1309(WA*11*)
uv reflectance, 223

Luminescence
kinetics in undoped KI and RbI crystals, 1320(TC*20*)

Luminescence (Continued)
quantum efficiency of —, 605(FF*15*)
of undoped RbI, 1320(TC*19*)

Magnesium
oxide
far infrared absorption of —, 859
preparation techniques for — reflectance standards, 1321(TD*19*)
spectrum, hyperfine structure, 845
Maser
biomedical experimentation with —, 607(SA*18*)
calcium-tungstate neodymium-doped, properties of —, 1319(TC*12*)
cathodoluminescent pumping, 602(FD*17*, FD*18*)
coherence theory for optical cavity —, 1322(FA*13*)
coherence time of —, 470
continuous operation
design of sun-pumped —, 595(TD*19*)
at room temperature, 608(SA*19*)
detection of — signals by photoelectric mixing, 337
efficient pumping of —, 1319(TC*13*)
high-energy experiments with —, 601(FD*1*)
neodymium glass, 602(FD*12*)
optical crystals for —, 601(FD*11*)
optics for —, 602(FD*14*)
quantum mechanical description of —, 594(TD*1*), 871
ruby
with afocal resonators, 602(FD*15*)
control of gain by Zeeman effect, 1323(FA*15*)
diffraction-limited —, 1319(TC*15*)
frequency ratio of optical harmonics from —, 880
interferometric studies of —, 595
multimoding and frequency-pulling experiments, 594(TD*12*)
multiple-section in spherical resonator, 602(FD*16*)
Raman source, 251
for vacuum-depositing thin films, 1319(TC*18*)
solid-state, small-angle scatter, 595(TD*17*)
for study of influence of electrical, magnetic, and gravitational fields on light propagation by interferometry, 1143
transmission in a two-level material, 1323(FA*14*)
Mercury
hydride
band-spectrum analysis of —, 1201
isotope shift in spectrum of —, 1205
infrared lines of — for secondary standards, 536
spectrum
energy levels and pressure shifts, 866
hyperfine structure, 845, and isotope shifts, 1311(WB*1*)
Metrology
frequency characteristic of continuous-wave He–Ne optical maser, 96
interferometer, for angle-displacement measurement, 1315(WD*17*)
length standard by Kr-86 line, 507
mapping of optical flats, 471, 600
oxide thickness on titanium, 427
wavelengths of mercury, 198, 866
Microscopy
image criterion for —, 608(SB*19*)
precision focusing with photoelectric detection, 1153
Microwaves
diffraction theory of Kirchhoff, 131
light modulation by —, 1316(TA*14*)
radar contrast patterns of airport runways, 51
Mirrors
aberrations for oblique incidence, 408, 412
aluminum for uv, silicon-monoxide protection of —, 1310(WA*18*)
polarization properties of corner —, 253

Neodymium
calcium-tungstate — -doped masers, 1319(TC*12*), 1323(FA*18*)
glass
interactions between two — lasers, 1323(FA*17*)
for pulsed laser, 1323(FA*19*)
pumping of — maser, 1319(TC*13*)
threshold pumping characteristics of — laser, 1318(TC*11*)
Neon
— -helium laser, for velocity of light, 1324(FA*20*)
Nitrogen
nitrous oxide
abundance of — in atmosphere, 858
emission spectra of pressure-modulated —, 543
spectral-line intensities from — plasmas, 829

Oceanography
infrared techniques applied to —, 607(SA*16*)
photometry of sea surface, 1083
Optical Society of America
board of directors, minutes of meetings, 1414, 1415
careers in optics, 235, 489
committees for 1962, 226
education in optics, 235, 349, 489, 841
local sections, 727, 842, 954
medals
Adolf Lomb, 612
Ives, 1089
Mees, 612, 1089
officers
for 1962, 102
for 1963, 1331
program of spring meeting, 588
reports
editor JOSA, 1416
secretary, 1417
treasurer, 1424
terminology, 490, 842, 954
Optical systems
aberrations
for concentric —, 1361, 1367
monochromatic, 20, 25
analysis of test of — for range finders, 1318(TB*18*)
for carbon-arc sun simulator, 1313(WC*15*)
condensing — for sun-powered continuous laser, 1319(TC*17*)
design of —
for attitude-induced temperature variation in space, 1313(WC*14*)
re-evaluation of problem of —, 1218
ray-tracing procedure for —, 672
refractive errors in — produced by dome, 1328(FD*18*)
transfer function of — computed by Fourier transform, 985, 992
Optics
of magnetized media, 1316(TA*15*)
role of — in correlation functions for pattern recognition, 454
Oxygen
multiplets of Oxygen I, transition probabilities of —, 592

Phosphors
brightness amplification in —, 605(FF*16*)
for fiber optics, granularity influence on face-plate transmission, 605(FF*17*)
fused quartz and sapphire as —, 835
quantum efficiency of —, 605(FF*15*)

Photographic emulsions
granularity analysis by Wiener spectrum, 669
line-spread functions of —, 948
monolayers, reaction cross section, 300
resolution and optical diffusion, 1317(TB*13*)
turbidity of monodisperse suspensions of AgBr, 888
Photography
aerial, effect of air turbulence, 1313(WC*16*)
contiguous-class exposure scales, 1318(TB*15*)
design of lens for night-reconnaissance camera, 1328(FD*14*)
distortion in panoramic —, 608(SB*18*)
effect of vibration, 1317(TB*11*)
motion-picture — with electronic flash, 1317(TB*12*)
resolution measurements made through Mach 3 and Mach 7 air flows, 1317(TB*14*)
ruby laser, high-speed study of coherent radiation from —, 878
sharpness and graininess, 45
technique for approximating sine-wave response of aerial film, 1408
two-photon theory of —, 300
Photometry
of blackbody radiation, photon density distributions, 604(FF*11*)
gonio —, improved recording, 1321(TD*18*)
note on invention of —, 1321(TD*17*)
primary standard of light, 731, 826
of sea surface, 1083
Plasmas
argon and nitrogen —, spectral-line intensities, 829
coherence of radiation from —, 98
cylindrical, radial distribution of emitters in —, 885
high-temperature, diagnostics of —, 591(TB*1*)
hollow cathode, for helium-level populations, 592(TB*15*)
Oxygen I, for transition probabilities of — multiplets, 592(TB*14*)
Platinum
reflectivity, absence of temperature dependence, 948
Polarization
analysis
of corner-cube Fabry-Perot interferometer, 452
of elliptical —, 1080
of partial —, 1316(TA*18*)
corner reflectors and cavities, 253
effect of — on energy diffracted by gratings, 1081
effect of anisotropic transmittances on representations of —, 1318(TB*16*)
ellipsometry, theory of —, 918
far-field diffraction and — properties of hollow cone, 1324(FB*12*)
flow birefringence, theory of, 562
of infrared by pyrolytic graphite transmission polarizer, 665
measurement of — by ADP modulator, 718
measurement of film thickness by —, 427
optical properties of films on silicon by ellipsometry, 970
representation by holor, 600(FC*13*)
retardation plates, theory of —, 339
of sunlit sky, wavelength dependence, 1164
ultimate performance of polarizers, 747
of ultraviolet and visible by film, 42
Potassium
dihydrogen phosphate, optical harmonics from, 880
iodide, luminescence kinetics in undoped — crystals, 1320(TC*20*)
Praseodymium
spectra of ions, time-resolved, 649

Quantum electronics
second International Conference on, 230
Quartz
fused, phosphorescence of —, 835
infrared properties of —, 1023
optical harmonics from —, 880

Radiation
blackbody, for standard of light, 731, 826
carbon arc as a — standard, 1156
Čerenkov — in a layered medium, 1315(TA*11*)
coherence of —, from plasmas, 98
modulation of — by microwaves, 1316(TA*14*)
thermal, properties of Irtran I and II, 605(FF*18*)
visible, from free electrons passing near a grating, 1315(TA*1*)
Radiometry
calibration laboratory for —, 1316(TA*16*)
irradiance distribution in haze and fog, 787
Ray tracing
cylindrical — equations for electronic computers, 472
general procedure for —, 672
for third- and fifth-order aberrations of triplets, 389
through optical dome to determine refractive errors, 1328(FD*18*)
through uniaxial crystals, 187
Reflectance
goniophotometer for —, 1321(TD*18*)
infrared
of aluminum films, 1310(WA*14*)
of aluminum oxide, 223
of beryllium oxide, 1078
of evaporated aluminum films, 1245
magnesium-oxide — standards, effect of preparation techniques, 1321(TD*19*)
of multilayer stack, 437, methods of altering, 1149
of opaque diffusers, 1250
of platinum and gold, absence of temperature dependence, 948
reststrahlen bands of evaporated films, 1309(WA*11*)
thickness adjustment of films to produce desired —, 1310(WA*19*)
ultraviolet
improvement of — for silicon-monoxide-protected aluminum mirrors by uv-irradiation, 1310(WA*18*)
of LiF, 223
Reflection
at complex angles, 1316(TA*13*)
from convex surfaces for magnification, 1305
filters for ultraviolet, 1310(WA*15*)
infrared, of reststrahlen crystals, 14
measurement of phase change on —, 1314(WD*12*)
from multilayer system, phase and amplitude, 918
phase-shift on —, at a double-layer system, 806, 912
total, attenuated, infrared for surface characterization, 592
Reflector
convex, as magnifier, 1305
corner, polarization properties of —, 253
Refractive index
of β-carotene solutions, 192
of coals and graphite by interferometry, 197
for complex angles, 1316(TA*13*)
of films on silicon by ellipsometry, 970
functions of — for selection of materials for lens design, 1327(FD*11*)
gradients in — measured by interferometer, 1314(WD*13*)
infrared
of quartz and sapphire, 1023
of sapphire at elevated temperatures, 1078
of infrared materials, 420
of lead monoxide films, 261
of synthetic sapphire, 1377

Refractive index (Continued)
of thin adsorbed films on metal surfaces undergoing stress, 1410
ultraviolet, of evaporated metal films, 1310(WA*17*)
Refractometry
long-path atmospheric dispersion by —, 777
slit width correction in gas —, 8
Relativity
distortions, 184
Doppler effect, experimental verification, 529
speed of light from moving source, 978
Rockets
response of — control devices to stars, 1313(WC*11*)
solar and stellar spectroscopy from —, 1312(WC*2*)
spectrograph for quartz region, 597(FA*14*)
upper-air emission measured from —, 1313(WC*12*)
Rubidium
iodide
luminescence kinetics in undoped — crystals, 1320(TC*20*)
luminescence of undoped —, 1320(TC*19*)
Ruby
laser
coherence and radiation characteristics of —, 594(TD*14*)
detection of axial-mode differences, 594(TD*14*)
determination of diffraction loss in pulsed —, 1319(TC*14*)
high-speed photography of —, 609(TD*14*), 878
optical correction of —, 1319(TC*16*)
time distributions, 594(TD*13*)
time-resolution spectroscopy of pulsed reflector —, 1323(FA*16*)
maser
control of gain by Zeeman effect, 1323(FA*15*)
diffraction-limited —, 1319(TC*15*)
frequency ratio of optical harmonics from —, 880
interferometric studies of —, 595(TD*15*)
multimoding and frequency-pulling experiments, 594(TD*12*)
Raman source, 251
for vacuum-deposited thin films, 1319(TC*18*)

Sapphire
infrared properties, 1023
at elevated temperatures, 1078
phosphorescence of —, 835
refraction and dispersion of synthetic —, 1377
Satellites
design of optical systems for — for attitude-induced temperature variations, 1313(WC*14*)
orbiting solar observatory, 609(FA*2*)
response of — control devices to stars, 1313(WC*11*)
solar and stellar spectroscopy from —, 1312(WC*2*)
spectrum of flashtube for Project Anna —, 339
Scattering
absorption by — materials, *292*
of aerosols, 896
angular dependence, Mie theory, 402
of atmosphere, 38
infrared, from upper —, 1313(WC*13*)
single-scatter theory, 787
visible and infrared, 1010
by concentric spheres, 551
forward, approximation formula for —, 797
in human eye media, 1326(FC*11*)
by large cones, 1093
Mie solution, early history of —, 342
from monodisperse suspensions of AgBr, Rayleigh and Mie theories of —, 888
multiple, 145
by inhomogeneous regions, 140
in opaque diffusers, 1250
in photographic materials, effect on resolution, 1317(TB*13*)
small-angle, from solid-state masers, 595
Silicon
fast high-sensitivity — photodiodes, 1237
monoxide for protection of aluminum mirrors for uv, 1310(WA*18*)
optical constants of films on —, by ellipsometry, 970
Silver
bromide, turbidity of monodisperse suspensions of —, 888
chloride, anomalous dispersion in infrared, 579
Sources
cylindrical, computation of radial distribution of emitters in —, 885
for extreme ultraviolet
high-intensity, continuous, for intensity standard, 605(FF*12*)
for reflectance measurements, 605(FF*13*)
helium continuum, for uv absorption-line determination, 1311(WB*16*)
infrared, radiant energy from, 859
open-air arc, opacities of —, 605(FF*14*)
propagation of light from moving —, 978
for spectra of aluminum oxide, 591(TB*13*)
sun simulator for Mark I space-environment chamber, 1313(WC*15*)
thermal, luminous efficiency of —, 395
xenon tube
stability of high-pressure —, 343
for optical pumping, 595
spectrum of — for satellite, 339
Spectra
of aurora, ultraviolet, 643
of diatomic molecules, 480
cathode-ray display of, 101
of cyanamide, rotational, 581
emission
calibration of spectro-fluorimeters for measurement of —, 1256
of californium, *222*
of CF, 1311(WB*13*)
of nitrous-oxide, 543
pressure broadening by inert gases, 546
of hydrogen, quadruple and induced dipole —, 591(TB*12*), 1004
HCl and DCl, 1
infrared
of dideuteroacetylene, 656
of hydrogen fluoride, 1108, 1113
Raman — of 1,4-cyclo-hexadiene, 1311(WB*14*)
rare-earth ions, time-resolved, 649
reflection — of LiF in ultraviolet, 223
rotational, of cyanamide, 581
solar
extreme ultraviolet, 597(FA*18*)
high resolution, 597(FA*14*)
ultraviolet, of aurora, 643
Spectrometer
direct recording, linear wavelength, for integrated band intensities, 592(TB*17*)
Ebert
aspheric — for simultaneous observation of many wavelengths, 515
for dual-wavelength analysis, 592(TB*18*)
effect of large aperture on performance of —, 258
far ultraviolet
for solar observations, 597(FA*15*)

streak spectrograph, intensity calibration of, 224
Spectrophotometry
Ebert, for upper-air emission measurements from rockets, 1313(WC12)
of fiber bundles, 1318(TB19)
photometric standards of ultraviolet and visible, —, 1399
photomultiplier circuit for precision —, 1321(TD20)
punch-card read-out for Cary and G.E., 597(FA19)
screens for absorption standards in —, 284
Spectroradiometry
infrared
of globar source and quartz mercury lamp, 859
high-resolution, calibration, 592(TB19)
of sky and terrain, 201
Spectroscopy
absorption band, quasi-random model for —, 606(SA11), 1208
calibration of streak spectrograph, 224
Ebert monochromator, aspheric for simultaneous observation of many wavelengths, 515
echelle, for extreme ultraviolet line profiles, 597(FA16)
enhanced Faraday, rotation in cesium vapor, 1316(TA17)
emission
isotope shift for mercury hydride, 1205
band analysis of mercury hydride, 1201
helium-level populations, 592(TB15)
hydrogen fluoride fundamental band, Lorentz parameters and vibration-rotation interaction constants, 1374
interferometric Fabry-Perot, 222
mathematical resolution of overlapping lines, 998
Oxygen I multiplets, transition probabilities of —, 592(TB14)
rocket, for quartz region, 597(FA14)
soft x ray, blazed replica gratings for —, 1312(WB17)
solar and stellar —, from rockets and satellites, 1312(WC2)
Stark effect in hydrogen, 239
temperature determination by —, 338
time-resolution of the pulsed reflector ruby laser, 1323(FA16)
total attenuated infrared reflection — for surface characterization, 592(TB16)
Transactions of the Triple Commission
Ottawa, 1960, 476
Columbus, 1961, 583
transmittance error due to spectrometer slit function, 831
vibrational —, review of papers in Optics and Spectroscopy, 103
Sun
orbiting solar observatory, 609(FA2)
simulator by 77 carbon arcs, 1313(WC15)
spectra, extreme ultraviolet, 597(FA18)
spectrograph, for observation of — in quartz region, 597(FA14)
spectrometer for far ultraviolet for observation of —, 597(FA15)
spectroscopy of — from rockets and satellites, 1312(WC2)

Terbium
fluorescence rise of — from short uv-burst, 1079
Thallium
hyperfine structure and isotope shift of —, 501
Thorium
ultraviolet spectrum of —, 447
Titanium
optical constants of —, by polarization, 427
Transmittance
anisotropic, effect of — on representations of polarizing optics, 1318(TB16)
of As-S-Br glass, 721
atmospheric, 38
of far-infrared filters, 17
of fiber-optics CRT face plate, phosphor-granularity influence, 605(FF17)
of films
evaporated, of double fluorides, 1310(WA16)
goniometer for —, 1321(TD18)
glass standards of spectral —, 1309(WA12)
of heterochromatic radiation computed by Bouguer's law, 569
infrared
of aluminum oxide, 223
of atmosphere over slant paths, 606(SA14)
of beryllium oxide, 1078
of sapphire at elevated temperatures, 1078
of polarizers, 741
spectrometer slit-function errors, 831
of turbid materials, 292
of a two-level material, 1323(FA14)

Ultraviolet
abbreviation for extreme —, 1186
concave diffraction grating for vacuum —, 1120
effect of — on solar absorptance and thermal emittance of polypropylene, 1318(TB17)
helium continua
for absorption of atmospheric gases, 1311(WB16)
in high-pressure discharges, 851
interference transmission filters for the far —, 1380
irradiation of silicon-monoxide protected aluminum mirrors to increase reflectance, 1310(WA18)
photometric standard for — spectrophotometers, 1399
polarizer, 43
reflection filters for —, 1310(WA15)
refractive index of evaporated metal films, 1310(WA17)
spectra of aurora, 643
spectrum of thorium, 447
vacuum
efficiency of aluminized gratings for —, 525
germanium Ritz standards, 1223
structure effects on optical properties of thin films, 606(SA13)

Vision
acuity
dark-adaptation dependence, 580
rod and cone mechanisms in — functions of luminance, *1326(FC12)
after image, duration of —, 219
amplitude-frequency response curve, chromatic-adaptation effect, 940
anomalous trichromats, chromatic Stiles–Crawford effect, 836
binocular
color, 226
conditions for stereopsis or rivalry, 1327(FC16)

foveal
areal dependence of threshold, 820
contrast thresholds and blurring of retinal image, 1035
frequency response, resonance at 9 cps, 1082
illusions, geometry of —, 565
inhibition of threshold by chromatic flashes, 599
laser for retina coagulator, 607(SA*17*)
light adaptation, initial stages of —, 589(TA*1*)
line-spread function
of living cat eye, 1326(FC*13*)
of living human eye, 1040, 1046
luminance
interaction with saturation, 1320(TD*14*)
spatial summation, anomalies of —, 1320(TD*12*)
theory of acuity as function of —, 1326(FC*12*)
threshold dependence on angular distance from inducing source, 1030
threshold interaction of moving and stationary stimuli, 1320(TD*11*)
time reciprocity, 720
Mach bands, visibility with imposed retinal-image motion, 719
masking of "darkness flashes" by "darkness flashes," 603(FE*14*)
on-response
to equally bright stimuli of unequal luminance, 934
psychophysically estimated, 720
parafoveal, colorimetry in —, 1321(TD*16*)
peripheral
binocular summation at absolute threshold, 1276
red-green sensitivity, 81
pictorial data analysis, conceptual model for —, 599(FB*17*)
pupillomotor spectral sensitivity curve, 1084
pupil servomechanism, environmental clamping, 925
receptors
molecular organization of —, 588(WA*1*)
optical properties of —, 589(WB*1*)
resolution and contour interaction, 598(FB*13*)
resonant-frequency effect of 9 cps, 1082
retina
coagulation by laser, 607(SA*17*)
electrophysiology of —, 588(WA*5*)
inhibitory interaction, 590(TA*3*)
retinal images
characteristics of defocused —, 598(FB*11*)
optical and optomotor factors in — formation, 589(WB*2*)
perfectly stabilized, 598(FB*12*)
retinal sensitivity near blind spot, 806
during saccades, 571
scattering in eye media, psychophysical determination of —, 1326(FC*11*)
sine-wave response, 89
spatial-frequency response, pupil-size dependence, 1046
spatial summation, anomalies of —, 1320(TD*12*)
spectral sensitivity, effect of test-flash duration on —, 697
spread function, psychometric determination of —, 460
stabilized retinal image, disappearance of heterochromatic targets, 1321(TD*15*)
stereopsis, conditions for, 1327(FC*16*)
Stiles–Crawford effect of anomalous trichromats, 836
stray light in eye inferred from luminous threshold in presence of inducing source, 1030
target detection, effect of structure, 214
temporal overlap, effect on brightness matching of adjacent flashes, 1174
threshold
binocular summation at — in periphery, 1276
dependence of — on visual angle, 820

X rays
blazed replica gratings for soft — spectroscopy, 1312(WB*17*)
quantum fluctuations, modulation-transfer-function evaluation of —, 774, 1162
ultrasoft — photons, detection by a G-M counter, 1312(WB*18*)

Zinc
hyperfine structure of — spectrum, 845
sulfide, reststrahlen of evaporated films of —, 1309(WA*11*)

Zone plates
focal isolation with Fresnel —, 1324(FB*11*)
interferometer using —, 1314(WD*14*)
